University Projects

E-Commerce Website

- **Description:** Developed a comprehensive e-commerce website that allows users to browse, search, and purchase products online. The platform includes features for user registration, product management, and secure payment processing.
- **Frontend:** HTML, CSS, JavaScript Backend: Core PHP , JavaScript
- **Database:** MySQL
- **Tools:** Git, Docker
- Designed and implemented the front-end user interface using HTML, CSS, and JavaScript, ensuring a responsive and user-friendly shopping experience. Backend Developer: Developed the backend using core PHP to handle user authentication, product management, order processing, and payment integration.
- Secure user login and registration with email verification.
- CRUD operations for products, allowing admin users to add, update, delete, and manage product listings.
- Shopping Cart Functionality for users to add products to their cart, update quantities, and proceed to checkout. Order Processing: Secure order placement and payment processing using integrated payment gateways. Search and Filter: Advanced search and filter options to help users find products easily. User Reviews and Ratings: Allow users to leave reviews and ratings for purchased products.
- **Outcome:** Successfully launched a fully functional e-commerce platform with a seamless shopping experience.
